

Introduction of Maifan Stone

Due to its strong adsorbability, Maifan Stone has absorption to heavy metal, such as lead, cadmium, chrome, Hg, copper, zinc, manganese and nickel, and radioelement uranium, thorium and radium, etc. Especially to hydride, titanate and mixed pathogen in water, Maifan Stone has very strong adsorbability. At the same time, Maifan Stone is of solubility property. It can release zinc, manganese, lithium, molybdenum, silicon and boron etc. various microelement, so that common water becomes into man-made mineral water. Maifan Stone still can adjust and balance PH of the water, which is good for the growth of biology. It can lower fluorin and remove chlorine, and make acidulous water and alkaline water become neutral water, so as to favor water purification and environmental protection. According to current developing condition, Maifan Stone in medical treatment is mainly used for cure dermatophytosis, chronic gastritis, high blood pressure, psoriasis, diminish inflammation and colibacillus, etc. In the aspect of food, it is applied for making bean curd, brewing soy and vinegar, etc, and its taste becomes very fragrant and mellow. In the aspect of drinking, it can be used for man-made mineral water, carbonated drinks, beer, wine and making tea, and pickling alcohol, etc. In cosmetics series, Maifan Stone is for skin care cream (or cream). If it is used for animal feed additive, it can increase its yield. And it is of very good effect for icebox deodorizer. Hence, Maifan Stone accorded with standard requirements can be widely used for medical treatment, industry, food, drink and plant, etc many aspects. Modern medicine approved that its ingredients accorded with medical health requirement, and had multi functions, such as adjust metabolism of human body, accelerate blood circulation, enhance elasticity of blood vessel and flex of capillary vessel, diminish inflammation, detoxification, diuresis and help digest, etc. It has certain functions to high blood pressure, angiosclerosis, pain for rheumatism, dermatophytosis and poriasis, gastritis and gastralgia, and prevention and cure cancer, etc. In the aspect of trauma infection, skin itch, eczema miliaria, chilblain chap, etc. it has certain curative effect. To Pb、Cr、Cd、Hg、As、U、Ra、1PPm the initial concentration adsorption rate is 30~96%. The adsorption to ethanol (vapor phase) it has confirmed saturated PH, about 20%. It can adjust in bigger scope weak acid, weak alkali medium, 5~11 to that PH is 6.5~8.5.
